About Me

I'm a software engineer with +5 years of experience, mostly focused on **backend** and **API development** with **Python**, covering the entire process from system design, data modeling, implementation, testing, documentation, deployment, and observability. I also have experience with **DevOps** tasks and frontend with **React**.

I like to share knowledge by giving [talks](#), being a [mentor](#) or simply helping others to solve problems. [E.g. the Django forum](#).

Currently interested in working on **Developer Experience (DX)**, specially through IaC. Also learning about Go, MLOps, [Elixir](#).

Experience

Fullstack Developer, Freelance – Copenhagen, Denmark Dec 2024 - present

- Software development of a live/on-demand content streaming platform. My tasks are varied since we work on a product made from scratch.
- Stack - **NextJS**, Express, **Typescript**, Serverless Framework, **AWS** (Lambda, CloudFormation, RDS)

Software Engineer, [Mercado Libre](#) – Córdoba, Argentina Jul 2022 - Jun 2024

- Worked improving **Python DX**, maintaining tooling used by thousands of developers in the company. (General support, features, bugfixes, version deprecation).
- Building on our Python expertise, we led upgrades for over 1,000 outdated Java applications and libraries using [Large-Scale Code Changes](#), managing the roadmap and collaborating with responsible teams to implement and monitor each update.

Fullstack Developer, [Flux IT](#) – Córdoba, Argentina Jan 2021 - Jun 2022

- Fullstack development (**React/Django**) to integrate 3rd party systems with internal company applications.
- Later, in a more **DevOps** role, I helped in the migration of the internal infrastructure to Kubernetes applying **GitOps**. This also led to better DX.

Django Developer, Freelance – Córdoba, Argentina

May 2020 - Sep 2020

- I helped designing new features and bugfixing for a [clinic history management system](#) made with **Django**.
- I worked both in the frontend and the backend, defining and updating Django models, views, forms and templates of the system. Also made **tests** for every functionality added or modified.
- As a necessity, I configured a **Django/Postgres** development environment with **Docker**. This greatly improved my familiarity with the technology allowing me, for example, to optimize images build time or to debug inside the container with VSCode.

IT Support, [Prodeman S. A.](#) – Córdoba, Argentina

Sep 2017 - Sep 2018

- My general goal was to provide **technical support** to all the employees on the company on everything referred to IT.
- Responsible for managing video surveillance systems, including hardware (analog & IP cameras such as Vivotek and Hikvision) and software (Nuuvo Video Management Software).
- Office365 tasks (Users administration, Mailbox backups, **Powershell** scripting)

Education

BS Computer Systems Analyst, Instituto Superior 25 de Feb 2015 - Dec 2020
Mayo – Córdoba, Argentina

Volunteering

[Hack Your Future](#): Joined as a Technical mentor to help people kickstart their programming careers

Skills

Programming Languages: Python, JavaScript/Typescript, Go

Technologies: Django, Pytest, React, Kubernetes, FluxCD, Docker, OpenTelemetry

Languages: Spanish (native), English (professional proficiency), Italian (A1), Danish (learning)
