About Me

I'm a software engineer with +5 years of experience, mostly focused on **Backend** development with Python.

I have strong experience in **DevOps** and cloud infrastructure, especially with **Kubernetes** but also with **Serverless** framework for **AWS**.

In addition, I'm comfortable working with several technologies like **TypeScript**, **React**.

I like to share knowledge through talks, mentoring, or helping others in communities like the Django forum.

Currently interested in positioning myself at the intersection of Backend and DevOps. Some terms that are interesting to me are **Developer Experience (DX)**, **Infrastructure as Code (IaC)**, **Observability** with OTEL.

Experience

Fullstack Developer – Freelance Nov 2024 - Jun 2025
Copenhagen, Denmark

- Worked on an MVP for a live/on-demand theater streaming platform, enabling theaters to reach broader audiences by recording and broadcasting shows online.
- Wore many hats in a small team of 3 devs, implementing features from frontend (**NextJS** with **TypeScript**) and backend (**Express**) to AWS infrastructure, with significant autonomy in technical decision-making.
- Automated CI/CD provisioning with **CloudFormation**, orchestrated via **Serverless Framework**, ensuring consistency and reliability across environments.
- Worked directly with the investor to translate business requirements into technical solutions and explain technical decisions in simple terms.

Software Engineer – Mercado Libre Jul 2022 - Jun 2024
Córdoba, Argentina

- Improved Python Developer Experience by maintaining internal tooling used by thousands of devs across the company. Supported thousands of developers through features, bug fixes, and clear documentation.
- Building on our Python expertise, we led upgrades for +750 outdated Java apps and libraries, managing the roadmap and coordinating with multiple teams for safe rollouts.
- Led an initiative for making a Tech Radar for the company's 4 key technologies (Java, Node, Python, Go), discussing with experts to identify how the company works with them, and establishing a framework for evaluating and classifying new technologies.

SSR Fullstack Developer – Flux IT Dec 2021 - Jun 2022
Córdoba, Argentina

- In a more **DevOps-oriented** role, participated in the migration of internal infrastructure to **Kubernetes**, applying **GitOps** with **FluxCD**.
- Improved **monitoring and observability** using **OpenTelemetry**, **Jaeger**, **Grafana**, and **Prometheus**.
- Increased involvement in system design, while continuing backend development with **Django** and **FastAPI**.
- Greater autonomy and effective communication with peers and technical leads.

Fullstack Developer – Flux IT Jan 2021 - Nov 2021
Córdoba, Argentina

- Fullstack app development with **React** and **Django**, integrating APIs from external platforms into internal applications.
- Actively collaborated in requirements analysis, proposing alternative scenarios and improvements.
- Onboarded new team members, facilitating their integration into the team.
- Recognized for collaborative attitude and taking on tasks outside my scope (QA, DevOps, IT Support).

Django Developer – Freelance May 2020 - Sep 2020
Córdoba, Argentina

- I helped designing new features and bugfixing for a clinic history management system made with **Django**.
- I worked both in the frontend and the backend, defining and updating Django models, views, forms and templates of the system. Also made **tests** for every functionality added or modified.
- Improved **Django/Postgres** dev environment using Docker, optimizing images build time and setting up debugging inside the container using VSCode.

IT Support – Prodeman S. A. Sep 2017 - Sep 2018
Córdoba, Argentina

- My general goal was to provide **technical support** to all the employees on the company on everything referred to IT.
- Responsible for managing video surveillance systems, including hardware (analog & IP cameras such as Vivotek and Hikvision) and software (Nuuo Video Management Software).
- Office365 tasks (Users administration, Mailbox backups, **Powershell** scripting)

Education

Computer Systems Analyst Feb 2015 - Dec 2020
Instituto Superior 25 de Mayo
Córdoba, Argentina

Volunteering

Hack Your Future: Joined in February 2025 as a Technical mentor to help people kickstart their programming careers

Djangonaut Space: Joined as a Navigator for Session 5 to the Djangonaut Space program. Navigators guide Djangonauts, the mentees of the program, by guiding them into contributing to Django by sharing resources or helping them troubleshoot technical issues

Others

Citizenship: Argentine, Italian

Programming Languages: Python, JavaScript/Typescript, Go

Technologies: Django, Pytest, React, Kubernetes, FluxCD, Docker, OpenTelemetry

Languages: Spanish (native), English (B2), Italian (A1), Danish (A1)
